- May be Installed on to an Existing tvLINK System
- Fully compatible with all tvLINK® distribution Products
- Fitted with F connectors for a professional installation.

Product description

The **NEW SPC4F** (Super Plus Combiner 4way professional product, with F connectors) allows the RF output of up to four Sky set-top boxes to be connected into a home distribution system, with independent control. The four Sky set-top boxes can be any combination of, the standard Sky Digibox, Sky+, or Sky HD, or all the same type, if required.

The user simply allocates the remote control in each room to one of the four set-top boxes connected. Thereafter, that remote control will operate the set-top box allocated to it. The only constraint is that once a remote control has been programmed to operate with one of the set-top boxes, it will not operate any of the other set-top boxes within the system.
